

SUMMER INTERN – OPERATIONS ENGINEERING

Company Background

Analytics Operations Engineering, Inc. is a unique Boston-based consulting firm focused on applying Operations Research and other quantitative methods to solve challenging operations problems. Analytics was founded in 1994 by Mitchell Burman and James Schor, then graduate students at MIT's Operations Research Center. We are a group of highly-trained consultants, all of whom hold Masters or Ph.D. degrees from top academic programs throughout the country. Our projects have dramatically improved productivity, lowered costs, increased capacity, and enhanced service levels at corporations throughout the world.

Job Description

Summer Interns at Analytics will be expected to work as analysts on client projects for a 10-12 week period. During that time, the Summer Intern will be teamed with an experienced Analyst on one or more client projects. The role of an analyst at Analytics varies depending on the requirements of each engagement and the capabilities of the analyst, but typically involves the following:

- Developing robust solutions to operations issues;
- Operations modeling and analysis;
- Data collection, organization, and evaluation; and
- Software tool development.

The summer intern experience involves client interaction, presentation of analysis both internally and externally, and may require some travel.

Qualifications

Successful applicants should have the following qualifications:

- Candidate for M.Sc. or Ph.D. in Operations Research or related field
- 1-2 years work experience preferred
- Strong communication skills
- Programming experience
